

Onboarding Guide

To create a new Nimbus Workspace, sign up at nimbus.example.com/signup with a work email address. Personal email domains such as gmail.com are allowed on the Free plan but are blocked when creating a Business or Enterprise Workspace, which require a verified company domain.

After signup, the setup wizard walks through three steps: naming the Workspace, inviting teammates by email, and connecting the desktop sync client. Inviting teammates is optional and can be done later from Workspace Settings > Members.

New members invited by email receive a link valid for 7 days. If the invite link expires, an admin must resend it from the Members page; there is no way for an invited user to self-request a new link.

Nimbus recommends installing the desktop sync client during onboarding so that an existing local folder of files can be imported directly into a Workspace. Imported files preserve their original last-modified timestamps but are re-versioned as new files in Nimbus.

Admins can assign one of three roles to each member: Viewer (read-only), Editor (can upload and edit), and Admin (can manage members, billing, and security settings). A Workspace must always have at least one Admin.
